Paris Design Week Maison &Objet

Graduate of the Versailles School of Architecture, Colomban pursues a practice as a designer-maker at his workshop in Paris suburb.
There, he explores and experiments with mobile, lightweight, and deployable systems, seeking to propose new, sustainable ways of engaging with space. Alongside this, he maintains an ongoing focus on material recycling and reuse in design, scenography, architecture, and landscape projects.

The exhibition will showcase five years of work focused on mobile, modular, and circular design. Each selected piece will tell a story of transformation and craftsmanship, highlighting the range of compositions possible with the *DePliables* system. For Paris Design Week 2026, a group of designers has been invited to create a unique model—an exceptional piece designed to assemble with the foldable tripod.

DePliable is a furniture series designed around a deployable leg system that allows the object's height and function to be adjusted.
Modular and appropriable, each configuration creates a new figure and suggests a specific use. Whether serving as a stool, table, bench, console, the structure can function as a seat or a support, while the surface can shift from a low table to a high table.
Handcrafted and highlighting the use of reclaimed or recycled materials, these pieces aim to offer an alternative to standardized folding furniture.
