

June and July - bestseller months for ceiling fans

The summer is far from over, but the past two months have shown that there has been a surge in interest in ceiling fans across Europe.

The current models have particularly quiet and smooth engines, a comparatively low power consumption and have arrived by design in the 21st century. Whether with real wood wings or lightweight ABS plastic; as a 3- or 4-wing; in white, black or chrome, ceiling fans are now available for every taste or room design. And they are not just room fresheners. Most models can still offer the existing ceiling light.

The fans of the Fanaway brand are particularly eye-catching. At first glance you look like a normal ceiling light, but at the push of a button, the fan is started and the wings are extended and provide immediate cooling. At the push of a button, they also re-enter automatically and the ceiling light remains visible.

Who prefers noble chrome and real wood wings will quickly be inspired by the Airfusion Akmani of the Lucci air brand. With a wing diameter of 152 cm it is suitable for rooms up to 40m². It has six speed levels and as a special extra an interval shift, which means that either the lower or upper three speed levels vary and thus act as a natural breeze. By remote control, the direction of the fan can easily be switched to winter operation. In this way, heating costs can be reduced in the cold season and the dry room climate can also be refreshed, all at a consumption of max. 35 watts.

The brand Bayside, on the other hand, stands for fans that are also able to accommodate coastal conditions. Since wings and housing are made of ABS plastic, they are humidity resistant and can also be mounted in sheltered outdoor areas.

Ceiling fans have proven to be the most economical way to feel at home in the summer temperatures. If you do not want to do without the constant cooling of the room with an air conditioning system, you can reduce energy costs by up to 40% by using a ceiling fan.

Beacon Lighting has its roots in Australia and has been developing luminaires and ceiling fans there for more than 50 years. Beacon Lighting Europe has been in existence since 2016, and this year we are exhibiting at Maison & Objet for the first time to introduce our products to a broad audience. We look forward to many interesting talks in our booth (Hall 6 / D64).
