

# From waste to eco-friendly beauties

We are constantly striving to become even more sustainable in the production of our products, and we are constantly looking for new, more sustainable alternatives. Therefore, we have decided to design a collection of eco-friendly digital printed carpets made from 100% PET material from recycled bottles. Yes, you heard right! Recycled bottles. And the result is both beautiful and practical.

We have not compromised on quality and usability in the process. These eco-friendly carpets have a soft texture and a durability that will amaze you. Resistant to water and mold, they are easy to clean making them a convenient choice both indoor (they are ideal in kitchens, bathrooms and hallways) and outside.

## *Extravagant recycled boho leather rugs*

Our eco-friendly Boho rugs are part of an extravagant interior design style that enriches your home with a laid-back charm. If you want to "go a bit more boho" but aren't ready to paint your home in bright colors, this vibrant rug might be all you need.

The hand-woven blankets of recycled leather from old leather jackets, bags and shoes are an eco-friendly statement for any home decor. Roll out the rug under a rustic dining room set, place one between two loveseats in bright colors, or use one to make your bedroom a bit more cozy and charming.

Visit us at stand F76-G75 Hall 4 and see and feel the beautiful carpets of recycled bottles, the unique rugs made from recycled leather and delicious plaids of recycled garments.
