

Sustainable Computer Keyboards

14/01/2020, Berlin/ Volker and Gunther Hentschel make computer keyboards a luxury design object. They manufacture the products with selected wood from sustainable forest management. At the Maison & Objet January 2020 they will also present a version in leather.

The timeless beauty of nature; Gebr. Hentschel keyboards are designed to last a lifetime. Each one is a lovingly handcrafted homage to the distinctive and unique qualities of the natural world. Robust yet elegant, they represent continuity in a world of constant change. As a natural material, each wooden board has its own unmistakable character.

The keys are produced using a hard-wearing mineral composite. The material consists primarily of natural stone dust and can be recycled, making it an excellent choice in terms of environmental sustainability. The engraved letters are colored by hand.

The flat keys and clearly defined keystrokes deliver maximum typing comfort. While you type, the heels of your hands rest comfortably on the lower part of the keyboard. Visually, the keys are reminiscent of fine white porcelain and makes the keys exquisite to the touch.

Gebr. Hentschel was founded 2019 by brothers Gunther and Volker Hentschel in Berlin. Gebr. stands for *Gebrüder*, which means brothers in German. Gunther is a forestry scientist. Volker is a mechanical engineer.

The keyboards start at 1.400€ and are made to order only. Delivery time is about 3 months.
