Hall 5A P26 (UNIQUE & ECLECTIC SIGNATURE)

Our wall decoration is SUSTAINABLE in many ways.

First of all, we use Japanese cypress trees which are over 80 years old. We do not need to cut trees down to harvest the outer layer of bark. Even if the spot where the bark is peeled looks red, it doesn't damage the tree, and the bark grows back so that we can harvest it again, about every 10 years. The bark is air-dried for about six months and then cut into thin pieces.

Our company makes roofs for traditional buildings in Japan. We have been doing this for 180 years, using techniques handed down for over 1,000 years.

Our Kasane panels are literally made using the same techniques, although our craftsmen make our wall panels on much thinner layers and only for interior use.

Our tailor made panels give a refined and enriched atmosphere to your interiors, and recommended to enhance certain areas in your space.

We make use of natural materials, without damaging nature. And, since they are natural, they will return to nature in the end.
