Miami/Cologne, January 2020

Pure Nature – the NAUTICAL TEAK HARDWOOD Parasol

The new, luxurious NAUTICAL TEAK HARDWOOD parasol is defined by nature in its purest form – with unparalleled TUUCI quality. This high-end material lends this new product a luxurious flair. It is available with two different masts: either made entirely of fine teakwood or featuring an aluminium core with a natural teak finish. With its authentic look, this generously proportioned shade system adds a new level of class to outdoor areas all over the world. At the beach, on the patio, in spas or in gardens: this new high-end parasol cuts a fine figure in both private and commercial environments.

With the NAUTICAL TEAK HARDWOOD parasol, TUUCI harks back to its roots. Inspired by ideas, qualities and durability requirements from the marine industry, the company from Miami combines certified Indonesian teak hardwood with premium quality, corrosion-proof steel grade RVS 316 components known for their strength and durability. With hubs, ribs and struts made of RVS 316 and a strong teak or aluminium core, TUUCI provides the ideal use of materials for a timeless look, reliable durability and maximum performance. Using natural resources in a sustainable way plays a crucial role: the material comes from the largest sustainably forested teak plantation in Indonesia, where, in terms of percentages, more trees are planted than felled and the wood is processed according to the strictest environmental standards. Only mature trees, which are between 50 and 80 years old at the time of felling, are used – a standard of quality that is reflected in the exacting demands that TUUCI places on its materials and workmanship.
