

LILJEBERGS

Liljebergs is a collection of images based on Göran Liljebergs photography of insects and other objects from nature. Behind his images are a great passion for butterflies, minerals, botany and many years of dedication to photography. Most photos has been used as illustrations in a variety of books but are now mainly used as art in home and public decor. Macro photography of small objects in large magnification has become Görans speciality.

The insects that are used are mostly borrowed from the Swedish Museum of Natural History in Stockholm where Göran is a member of the Entomological association, he also borrows from his Entomology colleagues and some are from his own collection.

Each image consists of sometimes hundreds of images that have been packed together with different depths of sharpness to create an exceptionally detailed and realistic image as possible. This macro technique allows you to enlarge the images at great magnification without losing any sharpness or detail.

The images are printed from highend 11-color inkjet printers in our photo&print-studio. They are printed on a matte 200 gram paper with pigment inks of the highest quality with a very long life span. This gives a quality and durability that far exceeds traditional offset printing.

Today we supply over 500 different designs of butterflies, beetles, minerals, botanicals, flowers, collages etc. They come in 10 different formats from size 15x15 cm up to size 60x80 cm and on several different backgrounds. We also supply frames, hangers, greeting cards and custom made designs.

"The goal is to show nature as it looks, with the detail, sharpness and color gamut required."
