Glass is one of the most popular decorative elements. A material that increases brightness and can even provide a specific colour if you choose tinted glass.

The range of containers we present to you is made of blown glass, 100% recycled, and is a local product, made in Europe.

Glass has an infinite number of uses... You can use white glass to add a classic and elegant touch or combine different tones to create a more neutral space.

We can opt for symmetrical containers or rather organic shapes that can give a more natural look to the object. Vases that mix various recycled materials can also create this heterogeneous effect.
