The pure and sleek design of clément brazille's works is easily recognizable. every stone tube is solicited and plays a major role in the balance of each object. 'there are many methods to begin a project', clément explains. 'I first started visiting the workshops and the idea of shaping stone tubes came to me. it seemed to be an interesting direction to follow with an important creative and innovative potential while keeping in mind the production implementation'.

each one of the high resistance stone tubes, carved and shaped to 4 cm in diameter, is a real technical masterpiece. the lightness and solidity of the tubes assembled together offers a collection of innovative and exclusive pieces. for the moment, the collection 'ocean travertine stone' proposes a desk, high and low consoles, side tables and coffee tables. **the elaboration and production have been realized by ateliers romeo, a company based in trani, southern italy.**
