

Decor - Light & Home's mission is to bring innovation into the furniture industry, an historical sector of Made in Italy.

All the products of our collections are Made in Italy and we are helped by plants! How is it possible?

Our furnishing accessories and lampshades are made from plant-based biopolymers, materials obtained from the remains of agricultural processes. This circular process not only eliminates the use of harmful materials but it further reduces waste, giving us the chance to recover this "waste" and convert it into unique and wonderful creations suitable for any living space.

In addition, deriving from natural yearly renewable sources, the oxygen produced by plants helps to offset the CO₂ emissions originating from the production process of the objects.

Each item is also made individually, making our production handcrafted and giving those who choose Decor - Light & Home the chance to customize the product during the order process.
