

Stoccolma Lamp a flexible light

designed by: Giulia Liverani

Stoccolma Lamp creates elegant light effects sliding on two electric and elastic cables

May light be flexible?

OliveLab's newest lamp is the answer to this question.

Winner of the Best of Best at Iconic Design Award and awarded the A Design Award Silver Prize, Stoccolma lamp uses an innovative system which allows the light to run on two flexible brass tracks.

Inspired by the strings of a musical instrument, Stoccolma is a lamp that works thanks to the tension of two elastic and metal cables that support and bring current to a central light source. This is linked to the tracks through a special hooking system which allows the light to be moved and rotated, giving the user the ability to bring light wherever it is needed.

Different anchor points that can be installed on the wall or on the ceiling makes Stoccolma easily customisable and extremely functional: a simple interactive lamp that can be placed obliquely, horizontally or vertically in order to perfectly fit in every ambient and light up every place.

The lacquered brass finishing is elegant and pure and the design is so minimalist that the lamp can be harmoniously and unobtrusively integrated into any existing interior. Sliding and rotating the lamp is possible to create precious light atmospheres passing from a decorative light to a reading light with a single gesture.

About Giulia Liverani

"I see light as a never ending series of possibility to create poetic and functional products"

Giulia's design process starts from light and emotions more than shape and colors. She's driven by the belief that lighting design is not just about light up a space but rather a way of furnishing, creating astonishment, magic and beauty. Those three themes are the foundations of her way to think light and the fittings that shapes it.

About OliveLab

OliveLab is a Startup based in 2017 in Turin, Italy. A small group of guys aiming to produce a new generation of lighting products. Attracted by innovations, materials and new technologies, OliveLab Team sees light as one of the most important resources of our life. The poetic but functional aspect of lighting takes OliveLab to realize new projects and fittings focused on the true needs of the final consumer. Putting together creativity, ideas and experiences those guys apply the same rigorous attention to context, process, material quality and detail to all their creations.
