### **Analog sound for a digital generation**

Record collectors are getting younger, which is visible in the sales of current vinyl releases. The number one record in the 2020 Discogs chart for example is "Live at Third Man Records". This is a limited edition of an invitation-only 2019 acoustic performance in Nashville by Billie Eilish and her brother Finneas. Artists like Tyler the Creator, Taylor Swift and Dua Lipa release their new songs on vinyl. We believe vinyl has a strong longevity in the years to come.

### **About Crosley**

Crosley Radio, based in Louisville, Kentucky (USA), develops and manufactures audio electronics products. The company is an incarnation of the original Crosley Corporation, founded in 1984 by Modern Marketing Concepts to revive the original Crosley brand, which was decommissioned in 1956. In 1992, Crosley Audio launched its first turntable. Today, Crosley is one of the leading suppliers of accessible priced turntables, radios and jukeboxes in the USA.

In 2013 Crosley introduced the "Cruiser" in Europe. A portable briefcase turntable with a leather look. Thanks to its integrated stereo speakers and its low weight of 2.5 kg, it's easy to use. Crosley products combine 21st century digital technologies with analog audio.

Crosley's aim is that it is possible for everyone to (re)discover analog music. The vinyl revival shows vinyl is here to stay. Crosley's record player collection range expanded from the briefcase design Cruiser to the just released C6 record with Bluetooth Out.
