

## DEESAWAT at sustainable

This year , DEESAWAT who is teakwood specialist since 1972 would like to present the concept of sustainable green which is collaborate project with designers in two direction

### MINIMIZED wood

This is showcase of the product , collaborate with THINKK design studio in Bangkok under the theme of minimized waste of wood material. In this collection, we have create a design with SAP wood (bark or skin) that normally cannot be used in production before. But added these piece as a design accent to the unit, make this unit a unique piece for indoor & outdoor.

## MAXIMIZE wood

This is a collaborate project with SAMUEL WILKINSON , designer from UK, to create a collection with the smallest size of material which is 1"x1.5" of timber which generally cannot be used for furniture production. With this concept, the unit was designed under the theme of "LESS is MORE". Small is valuable. The design trend that we aim at is timeless design where the collection can be easily adapt to all the interior & exterior trend . And above all, the product was designed to be totally pack flat for logistic support.
