

Organic & Made from waste

Our materials

75% of the originalhome collection is made from (organic) waste materials. This is because we believe that an important part of creating a sustainable future is waste management, indicated by the 3-R words: Reduce, Reuse and Recycle.

Waste as a raw material

Empty bottles from Zanzibar's (Tanzania) tourism industry

Every year the amount of industrial and household waste increases and only around 20% of global waste is being recycled. The other 80% ends up in landfill, in the sea, or is burnt. This causes huge problems for the environment, animals, and people.

We can reuse, recycle, or upcycle waste and turn it into modern interior accessories or furniture.

All originalhome waste materials are locally sourced. From harvesting and processing the raw materials to the end product; everything is executed by hand in small villages in Indonesia, Bangladesh, and Tanzania. Sometimes simple electrical hand tools are used.

Together we can make waste beautiful!

Products made from waste

Benefits of using waste:

- avoids the negative impact of producing new materials
- saves CO2 emissions, land, and trees
- stops destroying biodiversity
- improves waste management
- lengthens the lifetime of a material

Waste cotton

Throw Waste Cot. Gradient
Jute
