

Qbit Modular Furniture - Your Strongest Housemate

Durable, renewable furniture allows for continued emotional connection to your furniture as you progress through life's stages. Hold on to your memories as your furniture follows you through life.

"How can I extend the life of furniture?"

Darrel, a former founder of the traditional furniture customization industry, while walking through a furniture district, discovered that many unsatisfactory sofas were thrown out on the street.

"It takes a lot of effort and resources to make furniture, but it's so easy to throw away. I hope these resources can be used more effectively."

Too much waste was being created therefore Qbit was born to address this problem.

Innovative modular furniture design – flexible to match every stage of our lives

"I try my best to meet the needs of everyone. Most importantly, the quality of my furniture is consistent. Additionally, the furniture is flexible enough to adapt to different stages of our lives."

Qbit base plate furniture uses durable FSC zero formaldehyde, green construction birch board and sustainable design.

Darrel has the courage to experiment with innovative products. One day, she saw children playing with Lego – they put it together piece-by-piece, creating different things. This inspired her to spend many years researching different modular furniture designs.

After three years of prototyping, overcoming various obstacles, Qbit created a modularized base plate that was unique in the global furniture market.

Qbit created the interchangeable, foundational pieces: durable wooden base plates in two sizes, feet in four different heights, three specifications of cushioned armrests, covers, leather covers, and lamps. All these pieces are can be combined to create different furniture to suit different situations.

"Because I am not a very handy person, I wanted to create a design that was simple and safe to assemble – something that anyone can put together."

Subsequently, the Qbit Flip Sofa and Bed Frame use the same modular base plate as their foundation.

Get the style, specifications and functions you want. Disassemble and flatten the furniture to store and move with efficiency and ease.

Assembly doesn't require tools – only your hands are needed. Tool-free assembly is more intuitive and maximizes benefits.

Our inspiration is to care for people. It's very romantic to have memories connected to our furniture.

The flexible, modular concept and innovative base plate design enhances the furniture's functionality, reduces replacement and disposal, and maximizes resources.

The convenience of Qbit's modular, flexible designs are most impactful when people are experiencing growth and change.

"People-focused" is the brand's original intention. Furniture is an emotional link for people, there with you as you progress from young renter to married couple.

As you move for new jobs or promotions, the furniture can hold your memories for you.

It's the romance of manufacturing things that bring memories of the past to new life. We are constantly touched when we learn of the changes in the lives of our customers as they come back to buy additional modules and accessories for their Qbit furniture.

Smart furniture adapts to your life.

Great quality and design – furniture for your family.
