

THERMOBRASS GARDEN ORNAMENTS

African Metal Garden Ornaments 100% made from recycled white goods (washing machines, refrigerators, dryers and other household appliances)

Reuse and recycled products play an important role in everyday life today.

Buying recycled products means that material that would otherwise be considered waste and lying in a landfill is now being reused. By reusing materials, we reduce the demand for new materials. This process reduces the emission of pollutants when making new material.

Less energy consumption, which means less pollution and less damage to the environment. We can only welcome this 😊
