With a mission of making homes a bit more joyful, the Danish mother-daughter duo Stences is ready with their SS23 collection.

The bond between mother and daughter is unmatched. A shared dream of creating something together as a family became the starting point for Stences in 2020. A year later the duo Pia and Thea launched their first joyful collection of quirky, eye-catching home interior objects designed by Thea.

Within the first year the ambitious brand grew from 0 to 50 resellers in a total of 10 different countries. Stences is now ready to present their SS23 news with even more colourful additions to the brand portfolio.

Latest arrivals are the upcycled Icon andlesticks, where 2. quality candle holders have been powder-coated in collaboration with a local, Danish company. This season the bestselling Bubble crystal candlestick is also being introduced in three new joyful colours; blue, orange and pale yellow.

Longevity is always in mind when developing new products. The brand only works with long-lasting, carefully selected materials such as glass, ceramic, oak and steel. Thea's playful approach to design gives each item a very unique expression, that can easily be toned up or down depending on the owner's personal style.

By browsing the eye-catching collection, you will notice how contrasts are the main focus. Soft, organic shapes versus sharp, graphic lines. Sophisticated earthen tones versus bold, bright shades. By playing with these contrasts, the products will enhance one another while at the same time being able to fit into very different types of homes.

FUN FACT: Stences is short for "Christence" which is the shared middle name of Pia and Thea. They are both named after Pia's grandmother.
