

### **What does the name Belize Mar mean?**

Belize is essentially a Caribbean country. Mar means sea. Sand and sea are our main theme. But the most important meaning for us is of course the names of our children!

### **We can speak of a very decorative, Mediterranean and new generation design approach. What materials are your products made of and according to what process?**

This is what interests people the most. We often come across the questions "what is the material" or "how heavy is it". Indeed, like the entire furniture industry, we work with MDF and solid wood materials. Our difference here is the way we process and present an industrial material such as MDF. We can say that we are reinterpreting today's technology. The subject that we prioritize during the design is the customization of the product. Each of our products is designed to be used in several areas. For example, a cabinet can be used as a horizontal TV cabinet or vertically as a bookcase, for example.

### **There is a special craftsmanship, everything is done by hand. How is it possible to design one-to-one and tailor-made and stay away from mass production?**

We have an artisanal production process. Of course, we have all the machines in our workshop, but we rarely use mass production machines. Because our products require us to work by molding them by hand. Our expertise stands out. That's why we can't produce a 100% same product for the second time. We emphasize that we work in an "organic form". Just as the shape of every fruit on a tree is different but the taste is the same, we aim to leave such flavor behind. We can also say that "every one of our products is special for our customers".

### **Belize Mar is one of the newest representatives of a natural look. Can we hear from you what kind of style and point of view he has?**

In fact, we sought to create a feeling of space and serenity in the living areas. We are very happy to embroider the Mediterranean style with organic shapes and natural textures. Those who follow innovations in decoration know that we are in a new trend. Not everyone has the ability to build walls out of niches in their home, so we used wall niches for portable items. We live in cramped spaces and we miss nature. At the very least, we can use this piece of furniture to feel it again in our house.

### **We are introduced to a totally new material. How do you use the products you design? What are the details to pay attention to when using?**

In order to give the feel of the stone texture, we apply handwork to the surfaces and go through the painting stage. However, this rough texture can cause problems with cleaning and use, especially for women. Our products have a very rough and natural look, but they are also very easy to clean thanks to the special varnish that we have applied. It can be easily cleaned with a damp cloth, that is, the dust cloth will be lubricated on the fabric. We mention it specifically so you don't have to worry about it.
