ECOLOGY & SUSTAINABILITY

MATERIALS

We commit ourselves to encourage a sustainable way of living by choosing only sustainably and ethically sourced, natural materials, that are recycled, recyclable and eco-friendly.

Some of the natural fibers we use for the production of our designs include seagrass, water hyacinth, grass, rattan, bamboo, cotton, shells and wood.

We opt for materials that have a minimal impact on the environment and create little or no waste. Therefore we do not use chemicals or toxins during the processing and treatment of our products.

PRODUCTION

We source from local producers in Indonesia that operate a fair deal for their workers and employees. They are not only committed to paying fair wages to artisans and producers, but are also committed to providing a safe, healthy working environment that is free of harassment, discrimination, and forced labor.

We take great pride in our commitment to working hand in hand with local producers and suppliers.

By fostering strong partnerships within the community, we are able to bring you a wide range of products.

PACKAGING

We use sustainable packaging methods from renewable resources to create little waste. Our filling material is 100% natural and recyclable, made from vegetable starch, which offers the best protection for your products. The fiber pallets are pressed from waste wood. The green stretch and bubble wrap we use are 80% recyclable.

It is our responsibility to make conscious choices when selecting materials and production methods to minimize the damage we cause to our environment.

"The earth is what we all have in common. Take care of it."
