100% fabriqué en France
100% personnalisable

100% recycled/recyclable plastic
100% life guaranteed
100% made in France
100% customizable

POLIMAIR

Plastic, in a different way.

The young brand specializing in recycled plastic furniture continues to make waves. Polimair is committed to redefining sustainable design around four key pillars:

100% recycled plastic
100% lifetime guarantee
100% made in France
100% customizable

INNOVATIVE DESIGN

The Beluga chair, the first **100% recycled single-material** kit chair, embodies the convictions of the new wave of French design. Made exclusively from recycled PA6 derived from fishing nets and the textile industry, it is designed to combine durability with elegance.

The Beluga chair is a manifesto for a new kind of design, making **no compromises between style and sustainability**.

A PROMISING DEBUT

Since its launch in March 2024, Polimair has been featured at the **Change Now** summit, invited to **Milan Design Week**, and showcased at the **Future Fabrics Expo** in London. From September 5th to 9th, Polimair is simultaneously exhibited at the **Maison & Objet** fair and **Paris Design Week**. The Beluga chair is also making its debut in the storefront of the **Centre Pompidou boutique**, a major recognition in the design world.

A REAL GREEN COMPANY

POLIMAIR is not your typical design studio; this French industrial start-up is also making waves in the field of impact-driven entrepreneurship.

This year, it joins **Station F** through the **Act for Impact** incubator and also participates in the **Circular Season by Pulse and Suez**, further solidifying its commitment to driving change with influential support.

WHO ARE WE ?

TWO BROTHERS

Arthur and Léo, brothers and co-founders of POLIMAIR, combine their complementary experiences to bring us back to our original relationship with plastic: a material made to last.

Arthur, an architect and designer, focuses on creation, while Léo, the commercial lead, develops the brand's strategy.

Shaped by their childhood spent in Auvergne by a river overwhelmed with plastic waste, **they are determined to rethink our connection to this material** by offering furniture that truly stands the test of time.

ONE TEAM

To bring this ambition to life, Arthur and Léo surrounded themselves with a **team of experts**. For two years, they worked closely with engineers specializing in recycled materials, mechanics, and plastics, as well as mold makers from Puy-en-Velay (Haute-Loire).

Through hard work, this multidisciplinary team succeeded in **turning a bold idea into a tangible reality: a new kind of furniture**.
