

EUROCAVE

PRESS RELEASE

EuroCave celebrates 50 years of expertise and unveils the wine cabinet Harmonie at Maison & Objet 2026.

On the occasion of Maison & Objet 2026, taking place in Paris from 15 to 19 January, EuroCave is celebrating 50 years of expertise in wine conservation by presenting Harmonie, a wine cellar designed as a piece of furniture. Showcased within the Manufacture d'Excellence area (Hall 2 - stand O96), Harmonie features a unique horizontal format and shallow depth, meeting the needs of architects, home designers and interior decorators looking for elegant, integrated and customisable solutions.

A piece of furniture that adapts to the project, not the other way round

A major new feature at Maison & Objet 2026: Harmonie is now available in its bespoke version, offering total freedom to create a made-to-measure finish.

Wood, metal, lacquer, stone, fabric or any other material... professionals choose the finishes to ensure that the cellar blends in perfectly with the overall project. Thanks to this personalised finish, Harmonie becomes a harmonious design element that stands out while respecting the identity and style of each interior.

An innovation that is changing the way we look at wine cellars

Conceived as a design statement, Harmonie breaks with traditional codes. This hybrid approach makes Harmonie a design object, while maintaining EuroCave's precision standards: two independent compartments to simultaneously bring red and white wines to their ideal serving temperature.

EUROCAVE

Finishes for ready-to-install projects

For projects requiring a turnkey solution, the Harmonie collection also offers three finishes: light oak, white and smoked brown. Even with these trims, the cellar offers refined customisation:

- Choice of finishes for the trims and shelves: champagne, brass or black,
- An engraved plaque, allowing you to add a name, a date or unique signature.

Intelligent connectivity

The EuroCave Connect app allows a Harmonie wine cellar to be controlled from a smartphone. It enables users to manage the temperature and lighting while providing real-time information, making the management of the wine cellar simple and intuitive.
