ALE CASANOVAS SCULPTURES LUMINEUSES

NEW COLLECTION BUBBLES LAMPS

My floor lamps and pendant lights are made from welded metal, turned wood, LED technology, and paper. They are inspired by organic shapes: seeds in a pod, bubbles stuck together, or a distant nebula.
They obviously echo Isamu Noguchi's Akari lamps. As my techniques are structurally different, the shapes can be more random and irregular, which gives me immense freedom.
I am always available to listen to your projects and desires and draw inspiration from them to design unique lighting fixtures.
