

ANGO PRESS RELEASE

for M&O, PARIS JANUARY 15 - 19, 2026
HALL 1, POSITION C72 / D71

LIFE-ENHANCING INNOVATIVE SCULPTURAL LIGHTING

Every Ango piece is created in the belief that design can elevate the spirit, that sustainability can be deeply poetic, and that the gentle communality of light is reminder, we are all connected.

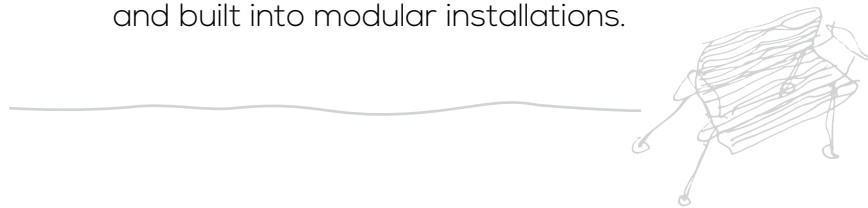

Ango is admired for its craft, but remembered for its soul – for the belief interwoven into every fibre and form: that with light, there is always hope.

As we continue our exploration of light, we invite you to discover our newest works loosely arranged around.

ENFOLDING

forms that embrace one another,
structures that connect and support,
designs that can be composed, layered,
and built into modular installations.

This approach empowers designers and project owners to create dramatic groupings that respond to space, scale, and the emotional atmosphere they wish to evoke.

FIRMAMENT 2

Handworked Metal Sculptural Pendant

Introducing a striking new organic form that can interlock with its neighbour to create a dynamic sculptural composition, Firmament 2 is another piece created by hand with extraordinary skill within the Ango signature "jewellery series" in brass, nickel silver, or copper finish.

Each connecting point of the diffuser structure is meticulously welded by hand, and the piece displays itself almost as a phantom with multiple nodes of refracted light with subtle variations of colour and depth, seemingly suspended in air.

Folded by Ango

Wall Mounted light in illuminated art object

Folded by Ango is a sculptural wall light that explores renewal through form, material, and light. Handcrafted from mulberry tree bark fibre and delicately folded with cocoon elements, each piece is shaped freely by hand, balancing craftsmanship and innovation. Folded becomes a gentle reminder that beauty can emerge from what was once left behind.

The diffuser material is harvested seasonally by villagers in Northern Thailand, preserving both natural cycles and traditional knowledge. Known for its distinctive texture and natural translucency, the mulberry bark allows light to filter through softly, creating a warm, calm, and inviting glow when illuminated.

Transcendence 2

Diaphanous Mulberry Fibre Sculptural Pendant Light

Transcendence 2 is a hand-crafted sculptural pendant light created in Thailand using Ango's signature composite of mulberry tree bark fibre and recycled fishing-net material.

The piece evokes the presence of a luminous floating cloud, bringing an organic, atmospheric softness to dining areas, living spaces, and hospitality interiors.

Shaped entirely by hand, the diffuser is formed from irregular wave patterns and delicate flux lines, giving the piece its cloud-like, weightless character.

Bounded

Organic Sculptural Light Object

A series of highly individualistic pieces that reference the synergy between freedom and being contained, and where this tension is then incarnated with light. Each piece is a unique creation, where even the material itself derives much of its strength from being "bound".

Originally created by Angus Hutcheson, Bounded is handcrafted from an advanced composite material combining mulberry fibre, organic mediums, and jute. Each piece is uniquely collaged and hand-painted, resulting in a luminous art object that beautifully diffuses light and transforms the atmosphere.
